

LEAFGEL PREMIUM

# Cordless Hybrid LED Light

## Étoile - エトワール -

## LEAFGEL PREMIUM'S LED light has leveled up even more

What is the ideal LED light?

- Cures evenly with no patchiness
  - Less likely to cause lifting

Both have been successfully  
achieved!

This time, instead of focusing on wattage(W), we focused on the  
number and quality of LED bulbs

### Maximum of 81 LED bulbs

The number of LED bulbs used is  
among the highest in its class.

They are placed in a layout that  
ensures even curing from every angle

No Patchy spots

LED wavelength breakdown:

$365 \pm 5 \text{ NM} \longrightarrow 27 \text{ bulbs}$

$405 \pm 5 \text{ NM} \longrightarrow 54 \text{ bulbs}$

### Instead of just lux (brightness)

we focused on total light energy output for better  
curing -  $\mu\text{W}/\text{cm}^2$  = microwatts per square centimeter

Using the latest LED chip  
technology, this lamp allows for  
strong, smooth curing even with low  
heat output. It cures quickly,  
reduces power usage, and is more  
energy efficient overall!

*Point.*

1. Helps reduce the risk of malfunction and extends the life  
of the lamp.
2. Designed to prevent overcharging by stopping  
automatically once the battery is full, even if the cord remains  
plugged in. No need to worry about switching it off or  
unplugging right away!

### Other Features

- Cordless use!
- Silent mode with no loud beeps.
- Compatible with both LED and UV  
gels.

- Can be used for 2.5 hours  
continuously on a full charge!
- Fully charges in about 3-4 hours.
- Comes with a footstand for easier  
foot services!
